

Medical Countermeasures

MITRE experts in Medical Countermeasures are dedicated to improving the speed, agility, and resiliency with which life saving medical products are made available to those who need them.

Medical Countermeasures (MCMs) are defined broadly to include FDA-regulated medical products (drugs, vaccines, biologics, devices, diagnostics, personal protective equipment, wearables, and other technologies) that can diagnosis, mitigate, treat, cure, or prevent disease or injury.

MITRE is a trusted partner that brings together industry, academia, and government to identify promising innovations and novel strategies to solve some of the nation's most pressing health challenges, including pandemic preparedness and response, biosecurity and CBRN defense, unmet medical needs, and medical innovation.

MITRE technical staff possess broad expertise in MCM design, development, and acquisitions. We provide technical and strategic support to a range of U.S. Government agencies to ensure the timely and cost-effective acquisition of life-saving MCMs for a diverse set of mission needs. MITRE's work enables the U.S. Government to develop and deliver safe, affordable, and effective MCMs for a safer and healthier world.

The threats to health we face are evolving and dynamic, as are the technologies available to counter them.

For information about MITRE's Medical Countermeasures expertise and capabilities, e-mail bio@mitre.org.

MITRE experts are motivated to keep families healthy, protect service members, and support healthcare providers.

MITRE's mission-driven teams are dedicated to solving problems for a safer world. Through our public-private partnerships and federally funded R&D centers, we work across government and in partnership with industry to tackle challenges to the safety, stability, and well-being of our nation.
